

# Visual-Tactile Breast Examination Model

Product No. **M44**

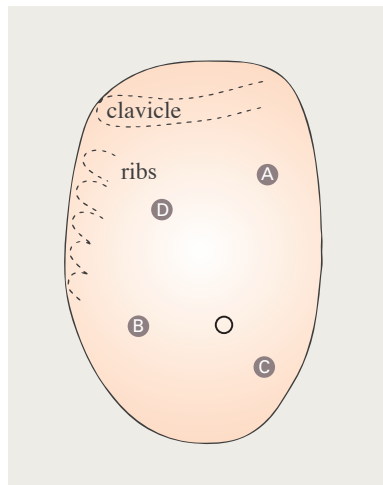

This model allows training in differentiation of four typical breast lumps including a cancer with dimple sign. Palpable clavicle and ribs are also embedded under the soft breast tissue. Effective both for professionals and for breast-self-examination.

Four typical breast lumps can be differentiated by palpation: two breast cancers (cancer with dimpling sign and cancer with skin depression), fibroadenoma and mastopathy.

Examination skills for skin dimple can be practiced.

Palpable collarbone and rib structure are embedded.

- A: cancer with dimple sign
- B: cancer with depression in the skin
- C: fibroadenoma
- D: mastopathy

## Set includes:

1 breast model attached to the case
